

EVault ArcWare™

Policy based file archiving

Data archiving is a key component of data lifecycle management. With the right tools and policies in place, data archiving can help businesses control and manage their data. Proper archiving increases the capacity of production servers and laptops, shrinks the backup window, and significantly reduces operational and infrastructure costs.

EVault ArcWare delivers automated policy based file archiving for moving older, unused or obsolete files off production line servers and storing them securely in a vault. Built on top of the same trusted infrastructure and innovative technology which drives EVault InfoStage, EVault ArcWare adds new capabilities which make it easy to deploy and manage your data environment.

Features and Benefits

Feature	Benefit
Automated, policy based	Automatically moves older, unused or obsolete files off production servers to a secure vault, increasing storage capacity on servers and lowering infrastructure costs.
Secure and efficient	Archived files are compressed and can be encrypted with 256 bit AES in transit and while in storage on the Vault to minimize size and ensure security of your sensitive data.
Centralized deployment	A single centralized server can archive files that reside on any network accessible share simplifying deployment.
Web based management	The intuitive Web based user interface can be easily accessed from any remote computer that is running Internet Explorer.
Active archiving	Archive files remain easily accessible. End users simply double-click on a link file from their computer to retrieve the file without any IT involvement
Integration with InfoStage	Built on top of the same mature technology as EVault InfoStage, the Archive Server stores files in a Director vault and supports QuickShip vaults, Vault Backup Agent, Tiered Storage, and more.

Key Benefits

Frees up Production Storage Space

Automated, Policy Based

Secure and Efficient

Shortens backup window
