

Protect Your Enterprise With the Leader in Secure Email Boundary Services

The Most Comprehensive, Flexible, and Trusted Email Security Solution

Postini Perimeter Manager Enterprise Edition is the industry's most comprehensive, flexible and trusted email security service. Based on its patented managed service platform, Postini blocks spam, phishing, viruses and other email threats before they can reach your enterprise email gateway. By choosing Postini Perimeter Manager Enterprise Edition, your enterprise can effectively prevent evolving email threats from impacting your network and end users, reduce complexity, ease your administrative burden and lower your total cost of ownership when compared to software and/or appliance products.

No other email security provider can match Postini's scope and depth of secure email boundary services for the enterprise by offering you:

- Comprehensive email threat prevention to stop spam, viruses, phishing and directory harvest attacks
- Flexible email security policy enforcement for both inbound and outbound emails and attachments
- Support for secure encrypted email transmission over the Internet based on the TLS protocol standard
- Complete email management and reporting through a convenient web console
- Lower Total Cost of Ownership with patented preEMPT™ managed service technology
- High availability, fault tolerant email processing

Postini® Perimeter Manager™ Enterprise Edition delivers:

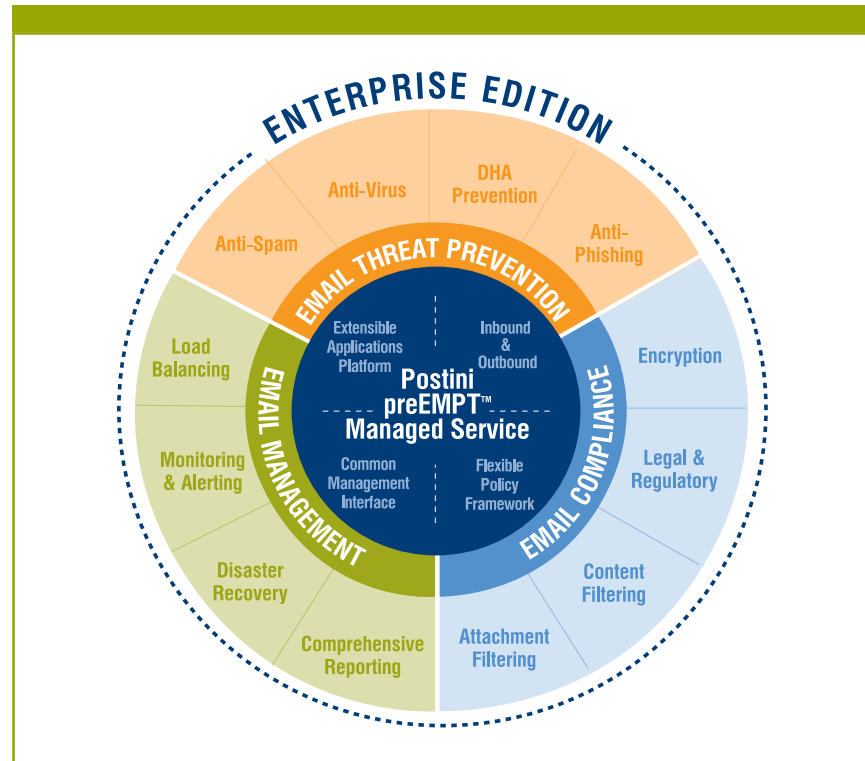

Figure 1 Postini Perimeter Manager Enterprise Edition provides a comprehensive solution for threat prevention, email policy compliance and management.

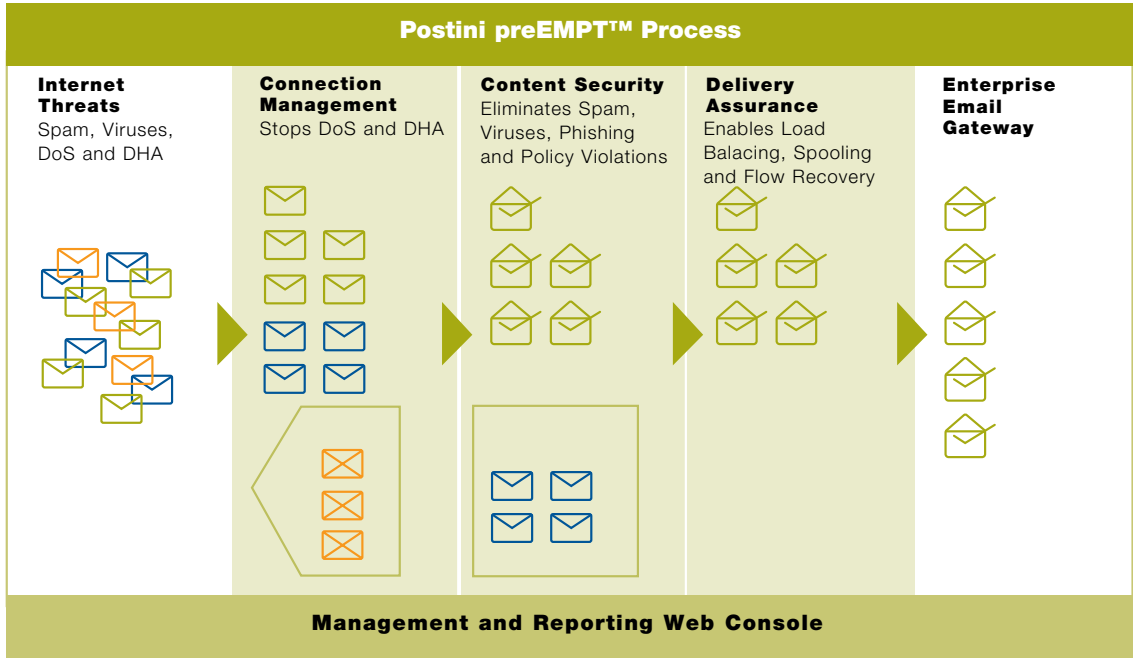

Comprehensive Email Intrusion and Threat Prevention

Postini Perimeter Manager stops spam, phishing, viruses, directory harvest attacks and other email threats with patented, multi-layer technology that delivers unmatched threat prevention and email protection.

Postini's preEMPT technology processes email in real time, through a highly secure system architecture that operates with no detectable latency, no data loss and no security compromises. Email is initially screened at the SMTP connection point through patent-pending IP "behavior" analysis capable

of eliminating up to 50% of invalid connections to your network. The balance of email is then screened through Postini's content filtering rules and heuristics to eliminate spam and other threats and enforce corporate and/or regulatory policy. All suspect email is blocked, and legitimate email is instantly forwarded to the enterprise destination mail server in real time, from memory. Based on your enterprise's email security policy, you can select the appropriate disposition for suspicious email: administrator quarantine, delete, log, or quarantine to a web-accessible storage area for user review.

Figure 2 Postini's patented preEMPT process eliminates threats at the SMTP connection point, filters content to remove or quarantine spam and suspect emails, and assures proper delivery of messages.

Flexible Policy Enforcement and Regulatory Compliance

Postini Perimeter Manager enforces email security policies and helps assure legal and regulatory compliance across the enterprise for both inbound and outbound email content and attachments. Postini's exclusive Auto-Encryption feature, for example, supports secure email transmission over the Internet based on the Transport Layer Security protocol standard.

If you need a flexible policy framework with enterprise-class security features, you will appreciate Postini Perimeter Manager Enterprise Edition. That's because Postini enables your enterprise to delegate access privileges for multiple administrators across many domains, as well as allowing email administrators to configure email policy enforcement for inbound and outbound messages according to global, group or individual users.

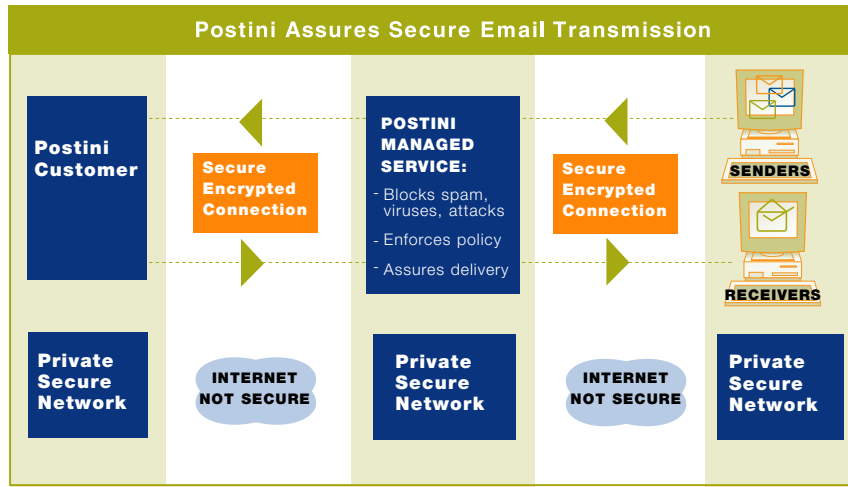

Complete Email Management and Reporting

Postini Perimeter Manager improves your email management through a convenient web console that provides real time monitoring and alerting, as well as comprehensive reporting for administrators. Email system availability and uptime are also enhanced with load balancing and business continuity assurance through disaster recovery capabilities.

Real Time IP Analysis and Award Winning Content Filtering

Processing more than 400 million inbound SMTP connections every day from 10 to 15 million distinct IP addresses, Postini currently blocks more than half of SMTP connections while the balance of messages are then screened by its award-winning content filtering. This exclusive multi-layer approach incorporating real-time IP analysis and advanced content filtering has proven to be highly effective in combating the shifting tactics of spammers and in preventing email threats from harming enterprise email systems.

Figure 3 Postini supports secure email transmission over the Internet via its exclusive Auto-Encryption capability.

From The Most Trusted, Secure Email Boundary Service In The Industry

In operation since 1999, Postini has redundant data centers in North America with additional data centers in Europe. Processing more than 3 billion emails every week, Postini Perimeter Manager assures consistent, reliable 99.999 percent service availability, with no latency in delivering legitimate email messages.

Choose The Postini Managed Service That Best Fits Your Needs

Postini Perimeter Manager Enterprise Edition provides a complete range of functions and features based on our award-winning, patented preEMPT technology for enterprises. A summary of Postini Perimeter Manager Enterprise Edition features compared with our Small Business Edition service is shown in Figure 4.

About Postini

Postini, the global leader in secure email boundary services, prevents email threats, enforces policy compliance and improves email manageability. Our patented preEMPT technology eliminates spam, viruses, phishing and other threats before they can ever reach your network. As a result, Postini reduces the complexity of your email operations, lowers costs, saves time, and minimizes risk. Processing more than 3 billion messages each week for 6.6 million users, Postini provides the most comprehensive, flexible and trusted email protection for enterprises and small businesses.

Postini Perimeter Manager received the Gold Award from Information Security magazine as best email security content filtering system in 2004. And, in a comparison test of leading anti-spam products as reported in Network World magazine, December 2004, Postini rated the highest for anti-spam filtering effectiveness—with the best overall balance of accuracy and low false positives.
